Chip,

It would be great to get the rest of the notes. It would also be helpful to get a description of what the abbreviated fish ID no. stands for. Right now, it is difficult to determine if the type of fish. Many of these seem like HH fish observations (many have the FZ pre-fix that indicates a "fishing zone"). It would be good to understand the observations for all fish - maybe separated by species. It is important that we know we have the data for all fish species collected - even if they were analyzed for the ecological risk assessment. Also, I would not truncate the "other comments section". The comments aren't long (those that I have seen), but the extra words and descriptions may be helpful to others reading / interpreting the observer's comments. I would also include field observations if available (there were some present in the Round 1 Field Sampling report).

And finally, do we know if they followed the "fish health assessment" form in the original SAP? If they have checklists for every fish, it would be great to just get the originals. If they didn't follow that form, do we know what procedures / protocols they followed in identifying and recording abnormalities?

-Jennifer

Fish condition observations table

Hi Chip and Eric,

Attached find 1) a table that compiles the Round 1 fish condition observations from 4 of the 11 field lab notebooks and 2) a memo summarizing the field logging process and information on how the table was prepared. Per our recent discussions, please let us know if you find the table format useful and we will expand it to include the fish condition observations from all 11 field lab notebooks.

Please don't hesitate to call if you have questions.

Gene
